

**Monday, March 4 – Shelter Medicine**  
**9:00 am – 10:45 am**

**I Have a Positive PCR from the Diagnostic Lab – Now What?**

PCR is a wonderful diagnostic tool. It has broadened our ability to get more information about the types of diseases that can infect our patients. However, there are issues. What questions should you ask when you get a positive PCR in a healthy animal? What if the clinical signs the animal has do not match the PCR results? These and other issues associated with diagnostic testing are addressed during this presentation.
